# ENERGY ACTION PLAN

## PERFORMANCE HIGHLIGHTS

**1338 MW is expected to connect to the grid in 2023 and 3081 MW in 2024.** A survey conducted by Eskom showed that the total number of projects in development is 66 GW.

One project from RMIPPPP is on track to reach legal close by the **end of October 2023, and two further projects by December 2023.** These projects will contribute an additional **424 MW once completed.**

**Three more projects from Bid Window 5 are on track to reach commercial close by the end of November 2023, representing 300 MW.**

Rooftop solar capacity in South Africa has **more than doubled since July 2022 to over 4,500 MW,** helping to reduce load shedding over the winter months.

## PERFORMANCE HIGHLIGHTS

### Standard Offer Programme

A total of 1136.5 MW has been approved for Eskom's **Standard Offer Programme, exceeding the target of 1000 MW**. The standard offer allows Eskom to buy **power from companies with extra capacity available at a cheaper price than the use of OCGTs**.

### Wheeling & Net Billing Framework

The NECOM wheeling framework is finalised and being prepared for submission to NERSA. The framework sets out the **principles of non-discriminatory rights of access to wheel electricity and the charges to be raised**.

A **draft Net Billing Framework** has been developed and **is awaiting approval by NERSA**. This will ensure all distributors have an export credit for feeding power into the grid.

**THANK YOU**
